Hightech-Disinfection for water and air

At IFAT Entsorga 2016, UV-Technik Speziallampen GmbH will be presenting digital UV-components for industrial air and water disinfection applications

From 30th May until 3rd June 2016, companies from all over the world present their technologies for the waste treatment market at IFAT Entsorga. For UV-Technik Speziallampen GmbH, the world's leading trade show is the ideal platform for presenting and launching its latest products. As a member of the internationally successful Hönle Group, the company develops, manufactures and sells UV-lamps, electronic ballasts, UV-sensors and other related UV components since 25 years. This UV-specialist offers **trend-setting component solutions for water and air treatment systems.**

The company presents at IFAT Entsorga its wide range of tailor-made products, which are setting new standards in highly automated production lines – worldwide. The main focus is concentrated on UV-system components for process water, **drinking water, waste water and ballast water installations.**

Digital electronic ballasts from the EPS- and MLC-series with specially developed digital controls are part of the numerous and sophisticated new developments of the company among other innovative trade show highlights. The result is a much more effective power supply and even better operation of UV-lamps.

Explosion-proof sensors certified to ATEX-IIC as well as digital sensors for monitoring the UV-intensity and process temperature will be exhibited in addition. Up to 255 sensors can be assembled in a single data bus with customized calibrations. This is customization at the highest level.
